What we do

Customer Cases

Transform Healthcare with Mobile Apps

Why a mobile app?

Communication

- **Contact** IVF Patients
- **Schedule** Appointments

Trust

Real-time access to lab data
(Images, Videos, Other IVF Data)

Share Knowledge

- **Information** about IVF
- Embryogenesis **updates**

- ✓ 22 years of operation/more than 50,000 IVF cycles performed
- ✓ 3,000 Cycles performed yearly
- ✓ Fully updated/comprehensive and pioneering treatment
- ✓ Whole spectrum of cutting edge techniques

Transform Healthcare with Mobile Apps

NSW HealthShare

- *NSW Health* provides a strategic framework for the delivery of 'the right care, in the right place, at the right time' for everyone. It controls 15 Local Health Districts responsible for providing health services in a wide range of settings, from primary care posts in the remote outback to metropolitan tertiary health centers. Eight Local Health Districts cover the greater Sydney metropolitan regions, and seven cover rural and regional NSW.
- *Project objectives:*
 - Paper based process to digital – mobile device ✓
 - 1200 health paper based forms dispatched to some 32,000 health in-field workers across NSW ✓
 - Dispatch secure medical records to any device anywhere at anytime ✓
 - Full control of in-field health workers ✓
 - In-field productivity gains ✓
 - Significant improvement to medical records management ✓
 - Integration to legacy medical systems and applications ✓
 - Centralized repository ✓

NSW HealthShare

The screenshot shows a mobile app interface for a 'Physical Appearance Form'. At the top, there's a blue header with a back arrow, the text 'Physical Appearance', and 'Physical Appearance Form'. Below this is the NSW Health logo and the title 'Mental Health PHYSICAL APPEARANCE'. The form is divided into sections: 'Patient Details', 'Physical Description', 'Additional Comments', 'Image Analysis', and 'Finalise'. The 'Image Analysis' section features four body diagrams (front, back, left side, right side) and a grid of icons for various conditions: Rash, Bruise, Scar, Ulcer, Past Suture, Current Suture, Tattoo, and Laceration. A 'Clear' button is next to the grid. At the bottom, there's a 'Comments' text area.

Transform Healthcare with Mobile Apps

PD-Manager

mhealth platform for Parkinson's disease management

Audience	Patients
Challenge	Monitor, apply treatment to patients with Parkinson's disease
Solution	Mobile apps for the assessment of cognitive condition and other non-motor and motor symptoms using wearable devices with sensors
Mobile benefit	New care model in terms of health outcomes, quality of life & care efficiency gains

Transform Healthcare with Mobile Apps

Patients

- Use wearable devices with sensors (insole, wristband) to monitor symptoms
- Use mobile apps for the assessment of cognitive condition mobile apps for MOCA and for other non-motor symptoms such as depression, compulsive behavior, hallucinations and delusions.
- Have sessions with psychologists/ psychiatrists, speech and language therapists, dieticians through secure video-therapy platform.
- Smart-pillbox will monitor his adherence to medication and will alert the caregiver, the wristband will inform caregivers about activity and the mobile app will monitor diet compliance
- Receive recommendations for modifications in medication, diet, activity, physiotherapy etc. sent to him by the respective member of the MDT.
- Been educated about how to cope with daily tasks and activities (occupational therapy) and manage speech, language and communication problems as well as eating, swallowing and drooling problems (speech and language therapy).

Transform Healthcare with Mobile Apps

Medical Staff

- Be alerted when the patient is in danger. Get feedback about the symptoms and will help the patient monitor these symptoms in severe cases.
- Help the patient do the MOCA test and any other questionnaires.
- Have access to psychologists/ psychiatrists and other therapists through a secure video-therapy platform.
- Monitor the patient's adherence to: medication (smart pillbox); suggested activity plan (wristband) and diet (mobile app)
- Receive recommendations for modifications in medication, diet, activity, physiotherapy etc.
- Have access to objective, continuous, real-time, longitudinal data monitoring for diagnostic accuracy. The data, automatically generated by the monitoring devices
- Provided with decision-support for complex symptomologies and will receive suggestions, mainly for medication, from the decision support module that will then process and send the revised management plan to the patient and his caregiver.
- Coordinate the MDT and collaborate with them in order to optimize the management plan.
